Connecting Thurro MCP Servers

A step-by-step setup guide for new users — Claude.ai & ChatGPT

Thurro MCP Servers

Thurro provides two MCP servers:

Server	URL to paste in	What it gives you
ThurroAltData	https://ai.thurro.com/mcpDB	Query Thurro's database of 2000+ Indian capital market datasets spanning all sectors, metrics, and economic indicators.
ThurroReports	https://ai.thurro.com/mcpReports	Search Thurro's financial knowledge base for Indian company research, earnings, credit ratings, analyst reports, DRHPs, and sector analysis

Adding on Claude.ai

Follow the section that matches your Claude plan. If you are unsure, individual subscribers (Pro/Max) use Section A. Company accounts use Section B.

A. Pro / Max (Individual) Plans

Step 1. Open your browser and go to **claude.ai/customize/connectors**
Step 2. Click the "+" button, then select "Add custom connector"
Step 3. Paste the URL for the server you want to add (see table at the top of this guide) and click **"Add"**
Step 4. Repeat Step 2–3 to add the second server if needed. Both connectors will appear in your list.
Step 5. You will be prompted to sign in — follow the Authentication steps in Part 3 of this guide.

B. Team / Enterprise Plans

Owner steps (done once by your workspace admin):

Step 1. Go to **claude.ai/admin-settings/connectors**
Step 2. Click "Add" → hover over "Custom" → select "Web"
Step 3. Paste the server URL and click "Add".
Step 4. Repeat for each server you want to make available to your team.

Member steps (each team member does this once):

Step 1. Go to **claude.ai/customize/connectors**
Step 2. Find the Thurro connector (labelled "Custom") and click "Connect"
Step 3. Follow the Authentication steps on the last page of this guide to sign in.

C. Enabling in a Conversation

After setup, you must turn on the connector each time you want to use it in a chat:

Step 1. Click the "+" button at the lower-left of the chat input box
Step 2. Select "Connectors"
Step 3. Toggle on the Thurro connector(s) you want active for that conversation

Adding on ChatGPT

You will need a ChatGPT Plus or Team plan. Custom MCP connectors require Developer Mode to be enabled first.

Step 1 — Enable Developer Mode

Click your profile icon (top-right corner) → select “Settings”
Open the “Beta features” or “Advanced” tab
Toggle on “Developer Mode” and close Settings

> ⚠️ *Note: Developer Mode must be enabled before you can add a custom MCP server. If you don’t see this option, confirm you are on a ChatGPT Plus or Team plan.*

Step 2 — Open MCP / Connector Settings

Go to: ChatGPT → Profile → Settings → open **Connectors**, **Developer**, or **Integrations**
Click “Add MCP Server”

Step 3 — Enter MCP Details

Fill in the fields as shown below. Repeat for each server you want to add:

Field	ThurroAltData	ThurroReports
Name	ThurroAltData	ThurroReports
MCP Server URL	https://ai.thurro.com/mcpDB	https://ai.thurro.com/mcpReports
Authentication Type	OAuth	OAuth

Step 4 — Sign In with OAuth

After clicking Connect or Add, you will be redirected to the Thurro login page. Follow the Authentication steps in the last page of this document.

Signing In (Authentication)

This sign-in flow is the same whether you are connecting via Claude or ChatGPT, and for both Thurro servers. You only need to do this once per server.

Step 1. Clicking “Connect” will automatically open the Thurro login page at ai.thurro.com. You do not need to navigate there manually.
Step 2. Enter your registered Thurro email address and click “Continue”. If you are not already registered, your LLM email id will be registered on Thurro.
Step 3. Check your inbox for a one-time passcode (OTP), enter it on the Thurro page, and click “Verify”
Step 4. On the authorization screen, click “Authorize” to grant access
Step 5. You will be automatically redirected back to Claude or ChatGPT. The connector is now active and ready to use.
